This material and the information herein is the property of Fuji Electric Device Technology Co., Ltd. They shall be neither reproduced, copied, lent, or disclosed in any way whatsoever for the use of any third party nor used for the manufacturing purposes without the express written consent of Fuji Electric Device Technology Co., Ltd.

This material and the information herein is the property of Fuji Electric Device Technology Co., Ltd. They shall be neither reproduced, copied, lent, or disclosed in any way whatsoever for the use of any third party nor used for the manufacturing purposes without the express written consent of Fuji Electric Device Technology Co., Ltd.

0. Cautions

- Although Fuji Electric Device Technology is continually improving product quality and reliability, a small percentage of semiconductor products may become faulty. When using Fuji Electric Device Technology semiconductor products in your equipment, you are requested to take adequate safety measures to prevent the equipment from causing physical injury, fire, or other problem in case any of the products fail. It is recommended to make your design fail-safe, flame retardant, and free of malfunction.
- The products described in this specification are designed and manufactured in order to use automotive switching applications. If you're considering a special use of these products in case of equipment or system for ship, aerospace, medical, nuclear control, submarine repeater and the like, contact Fuji Electric Device Technology and obtain our consent.

0-1. Warnings

- The MOSFETs shall be used in products within their absolute maximum rating (voltage, current, temperature, and so forth). The MOSFETs may be destroyed if used beyond the absolute maximum rating, or may cause dynamic destruction by means of unexpected mechanical stress.
- We only guarantee the non-repetitive and repetitive avalanche capability and not for the continuous avalanche capability which can be assumed as abnormal condition. Please note the device may be destructed from the avalanche over the specified maximum rating.
- Do not directly touch the leads or package of the MOSFETs while power is supplied or during operation, in order to avoid electric shock and burns.
- The MOSFETs are made of incombustible material. However, if a MOSFET fails, it may emit smoke or flame. Also, operating the MOSFETs near any flammable place or material may cause the MOSFETs to emit smoke or flame in case the MOSFETs become even hotter during operation. Design the arrangement to prevent the spread of fire.
- The MOSFETs should not be used in an environment in the presence of acid, organic matter, or corrosive gas (hydrogen sulfide, sulfurous acid gas, and other corrosive gas).
- The MOSFETs should not be used in an irradiated environment since they are not radiation-proof.

0-2. Warnings for designing

- Design the MOSFETs to be operated within the specified absolute maximum ratings (voltage, current, temperature, and so forth) to prevent possible failure or destruction of devices.
- Consider the possible temperature rise not only for the channel and case but also for the outer leads.
- The equipment containing MOSFETs should have adequate fuses or circuit breakers to prevent the equipment from causing secondary destruction such as fire and explosion.
- Use the MOSFETs within their reliability and lifetime under certain environments or conditions. The MOSFETs may fail before the target lifetime of your products if not used under certain reliability conditions, especially in the severe condition with corrosive gas or of high temperature and high humidity.
- Be careful when handling MOSFETs for ESD damage (It is an important consideration.).
- When handling MOSFETs, hold them by the case (package) and do not touch the leads and terminals.
- It is recommended that any handling of MOSFETs is done on grounded electrically conductive floor and tablemats.

This material and the information herein is the property of Fuji Electric Device Technology Co., Ltd. They shall be neither reproduced, copied, lent, or disclosed in any way whatsoever for the use of any third party nor used for the manufacturing purposes without the express written consent of Fuji Electric Device Technology Co., Ltd.

- Before touching a MOSFET terminal, discharge any static electricity from your body and clothes by grounding out through a high impedance resistor (about 1M).
- When soldering, in order to protect the MOSFETs from static electricity, ground the soldering iron and soldering bath through a low impedance resistor.

0-3. Warnings for installation

- Soldering involves temperatures which exceed the device storage temperature rating. To avoid device damage and to ensure reliability, follow the description of resistance to soldering heat for surface mounting devices as stated in 12 reliability test items.
- Devices shall not be exposed by any chemicals or physical damage.

0-4. Warnings for storage

- The MOSFETs must be stored at a standard temperature of 5 to 35 and relative humidity of 45 to 75%.
- The MOSFETs should not be subjected to rapid changes in temperature to avoid condensation on the surface of the MOSFETs. Therefore store the MOSFETs in a place where the temperature is steady.
- The MOSFETs should not be stored on top of each other, since this may cause excessive external force on the case.
- The MOSFETs should be stored with the lead terminals remaining unprocessed. Rust may cause presoldered connections to fail during later processing.
- The MOSFETs should be stored in antistatic containers or shipping bags.

0-5. Compliance towards restricted substances

- This products do not contain PBBs (polybrominated biphenyls), and PBDEs (polybrominated diphenyl ethers).
- This products do not contain Class-I ODS (Ozone-Depleting Substances) and Class-II ODS substances set force by "Clean Air Act of U.S." law.

• If you have any questions about any part of this specification, please contact Fuji Electric Device Technology or its sales agent before using the product.

• Neither Fuji nor its agents shall be held liable for any injury caused by using the products not in accordance with the instructions.

• The application examples described in this specification are merely typical uses of Fuji Electric Device Technology products.

• This specification does not confer any industrial property rights or other rights, nor constitute a license for such rights.

They shall be neither reproduced, copied, lent, or disclosed in any way whatsoever for the use of any third party nor used for the manufacturing purposes without the express written consent of Fuji Electric Device Technology Co., Ltd.

1. Scope This specifies Fuji Electric Device Technology Intelligent power MOSFET F5043-S.

2. Construction Silicon planer type
 Circuit part ; Self isolation structure
 Output part ; N-channel enhancement mode power MOSFET

3. Application For switching

4. Outview T-PACK s-type (EIAJ SC-83) Outview See to 18/19 Page
 Taping specification See to MS5D1579
 Packing specification See to MS5Q0023
 See the internal structure on Page 19/19.

5. Absolute maximum ratings (at Tc=25 , unless otherwise specified.)

Descriptions	Symbols	Characteristics	Units	Conditions
Drain-Source Voltage	V _{DSS}	40	V	DC
Gate-Source Voltage	V _{GSS}	-0.3 ~ 7.0	V	DC
Continuous Drain Current	I _D	12	A	-
Maximum Power Dissipation	P _D	30	W	-
Operating Junction Temperature	T _j	150		-
Storage Temperature Range	T _{stg}	-55 ~ 150		-
Single Pulse Inductive Load Switch-Off Energy Dissipation	E _{CL}	100	mJ	T _j =150 , L=5mH, I _D =8A Single Pulse, dv/dt 10V/μs

6. Electrical characteristics (at Tc=25 , unless otherwise specified.)

Descriptions	Symbols	Conditions	Characteristics			Units
			min.	typ.	max.	
Drain-Source Clamp Voltage	V _{DSS}	I _D =1mA V _{GS} =0V	40	-	60	V
Gate Threshold Voltage	V _{GS(th)}	I _D =10mA V _{DS} =13V	1.0	-	2.8	V
Operation Gate Voltage (protection circuit operates)	V _{GS(p)}	—————	3.0	-	7.0	V
Zero Gate Voltage Drain Current	I _{DSS}	V _{DS} =13V V _{GS} =0V	-	-	100	μA
		V _{DS} =30V V _{GS} =0V	-	-	1	mA
Gate-Source Leakage Current	I _{GS(n)}	V _{GS} =5V	**	-	500	μA
	I _{GS(un)}		***	-	800	μA
Drain-Source On-State Resistance	R _{DS(on)}	I _D =5A V _{GS} =5V	-	-	140	mΩ

** Under normal operation

*** Under self protection

They shall be neither reproduced, copied, lent, or disclosed in any way whatsoever for the use of any third party nor used for the manufacturing purposes without the express written consent of Fuji Electric Device Technology Co., Ltd.

Descriptions	Symbols	Conditions	Characteristics			Units
			min.	typ.	max.	
Turn-On Time	t_{on}	$V_{DS}=13V$ $I_D=5A$	-	-	50	μs
Turn-Off Time	t_{off}	$V_{GS}=5V$	-	-	50	μs
Over-Temperature Protection	T_{trip}	$V_{GS}=5V$	150	-	-	
Short Circuit Protection	I_{oc}	$V_{GS}=5V$	12	-	-	A

7. Electrical characteristics (at $T_c=-40\sim 105$,unless otherwise specified.)

Descriptions	Symbols	Conditions	Characteristics			Units
			min.	typ.	max.	
Drain-Source Clamp Voltage	V_{DSS}	$I_D=1mA$ $V_{GS}=0V$	38	-	62	V
Gate Threshold Voltage	$V_{GS(th)}$	$I_D=10mA$ $V_{DS}=13V$	1.0	-	3.0	V
Operation Gate Voltage (protection circuit operates)	$V_{GS(p)}$	—————	3.0	-	6.7	V
Zero Gate Voltage Drain Current	I_{DSS}	$V_{DS}=13V$ $V_{GS}=0V$	-	-	170	μA
		$V_{DS}=30V$ $V_{GS}=0V$	-	-	1.6	mA
Gate-Source Leakage Current	$I_{GS(n)}$	$V_{GS}=5V$ *	-	-	600	μA
	$I_{GS(un)}$	$V_{GS}=5V$ $T_j > 150$ **	-	-	940	μA
Drain-Source On-State Resistance	$R_{DS(on)}$	$I_D=5A$ $V_{GS}=5V$	-	-	205	m Ω
Turn-On Time	t_{on}	$V_{DS}=13V$ $I_D=5A$	-	-	62	μs
Turn-Off Time	t_{off}	$V_{GS}=5V$	-	-	52	μs
Short Circuit Protection	I_{oc}	$V_{GS}=5V$	8.4	-	-	A

* Under normal operation

** Under self protection (Short Circuit ~ Short Circuit Protection ~ Over-Temperature Protection)

8. Thermal resistance

Description	Symbol	Condition	Characteristics			Unit
			min.	typ.	max.	
Thermal Resistance	$R_{th(j-c)}$	Junction - case	-	-	4.2	/W
Thermal Resistance	$R_{th(j-a)}$	Junction - Ambient	-	-	100	/W

9. Electrostatic discharge

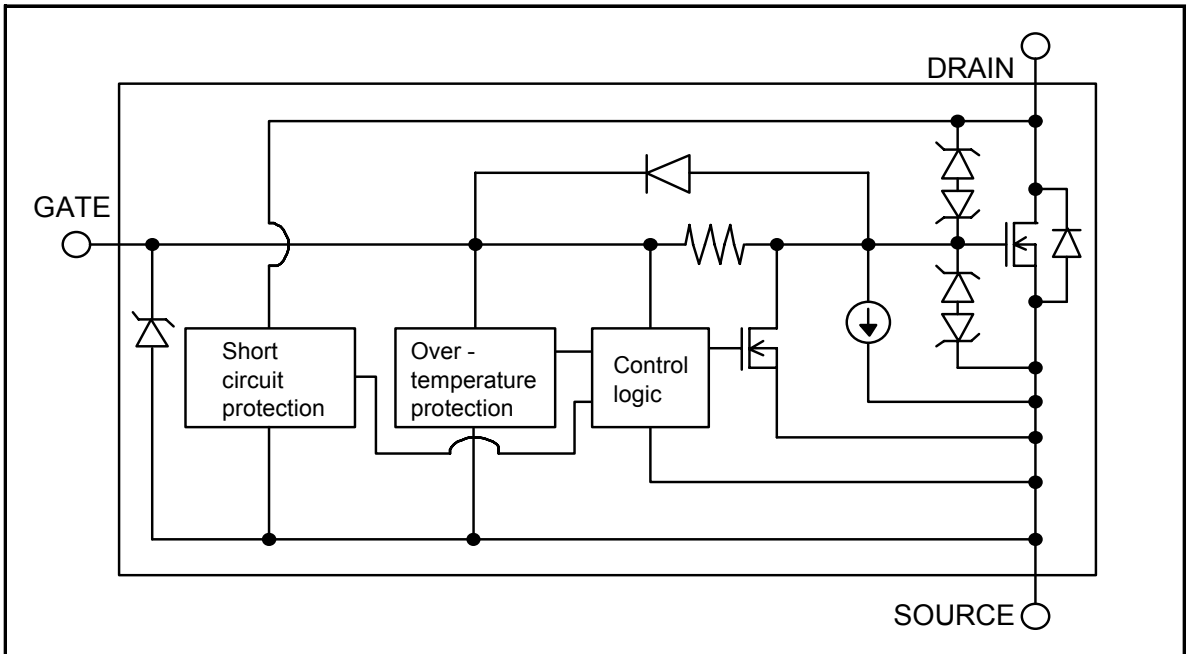

Descriptions	Conditions	Characteristics			Units
		min.	typ.	max.	
Drain-Source	150pF, 150 Ω	± 15	-	-	kV
Gate-Source		± 0.5	-	-	kV

S : First Characteristics

14. Marking

The lot number is made up of five characters. The first is the last digit of the year.

The next is the month, October through December are indicated by the first initial letter of the month, O, N, and D.

The last three are digits indicating the assembly lot number.

Upper two of five underlined in the products signifies Lead-free external terminals.

15. Labeling

 symbol represents "Lead-free" external terminals.

16. Environmental issues

Complete elimination of specified CFCs and trichloroethane.

17. Recommended reflow profile

See the temperature profile in the test No.1 on Page 8/19.
